## JUST FOR THE LADIES !

It is fast becoming a women's world. We at Joliet Electronics realize the potentials and imagination that is much more characteristic in women than men. Because of this we are offering a course in electronics for women only to give the female of the species a chance to compete with the men.

Although most people think of electronics as a man's field, many ideas and valuable improvements in the field have been made by women. Now that the tiny transistor is taking over the vacuum tube, it is apparent that a woman's touch is badly needed.

Perhaps you have never entertained the thought of learning more about the modern world we live in. Going back to school may even seem a little ridiculous to you. If this is true it is probably because no one has made it convenient and financially practical. Our school is comfortable, well located, air-conditioned and perfectly suited for classes made up of women only.

Let's look at this thing a little closer and with an open mind. What do you do with your afternoons on Monday and Wednesday or Tuesday and Thursday? Could you attend a pleasant class session between the hours of 1 and 4 O'clock on any two of these days? If the answer is yes, then read on.

We do not ask you to sign any fancy contracts or agreements. In fact, we ask you to sign nothing. We have a great faith in our product, which is education and our method of teaching. Thus, there is no need for binding agreements. We are more interested in getting women interested in the electronics as a future or hobby. There is a great need for women in electronics since there are not enough well qualified men to fill the present positions.

What does this program cost you? In answer to this we have an offer that no serious minded person can overlook. You pay only five dollars per week for as long as you care to go. The total course extends for a period of nine months. You are privileged to interrupt at any time with no further payments. There is no down payment and everything including paper and pencils is furnished. If you complete the entire course you are presented with a State of Illinois approved diploma as well as any equipment you build during the course.

Just what will you do in school? To begin with you will learn the electron theory which will explain things going on about you that you have never dreamed of. You will begin to understand such things as atomic fallout, nuclear energy, lightning and simple household appliances. You will begin to look at our modern world through much different eyes. Later, you will study the inside workings of radio and television receivers, transistor ~~circuits~~ and numerous other communication devices. You will experiment with all these circuits in our modern laboratory. Laboratory and lecture time are divided equally.

You will be given the best books on electronics, build a valuable vacuum tube voltmeter which is presented to you upon graduation and many other interesting accomplishments.

This will open a new life for you, a useful worth-while life of enjoyable work. If you are still in doubt, we invite you to attend two weeks free of charge to decide whether or not you attend further. If you can count to four, you are qualified.

Call Joliet School of Electronics--Joliet 3-7843 between 12 and 7 PM for any further information you may desire. If you are married, please ask your husband to investigate our school for you. By the way, we have night classes for working men and special rates for husband and wife teams.

Sincerely,

John W. Edmunds  
Director of Education  
Joliet School of Electronics
